DETAILED ACTION

Response to Amendment

The amendment filed on October 6, 2003 has been considered but is ineffective to overcome the prior art reference and an action on the merits follows.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1 and 2 are rejected under 35 U.S.C. 103(a) as being unpatentable over Neitzel et al. (3,213,780). Neitzel discloses a bulk material (baler fig. 1) comprising a frame (40, 41), bale strap guide tracks (fig. 1), strap drivers and bale strap fasteners (129; fig. 9, 10). Neitzel does not disclose a plurality of driver motors being attached to each of said head walls. It would have been obvious to one having ordinary skill in the art at the time the invention was made to add additional drivers (i.e. power means), since it has been held that mere duplication of the essential working parts of a device involves only routine skill in the art. *St. Regis Paper Co. v. Bemis Co.*, 193 USPQ 8.

Further, it is well known in the mechanical arts to increase power means (drivers/motors/pumps) for improved efficiencies.

Claims 3-9 and 16-22, as best as can be understood, are rejected under 35 U.S.C. 103(a) as being unpatentable over Sauer et al. (3,720,158) as noted in the previous Office Action.

Response to Arguments

Applicant's arguments have been carefully considered. Applicant argues, that Neitzel fails to anticipate the claimed invention, this argument is deemed moot, in view of the above rejection.

Applicant's arguments, regarding the 35 U.S.C. 103 rejections (clms. 3-9, 16-21) are not clearly understood and failed to clearly distinguish, what is believed to be the patentable subject matter/structure over Sauer. Applicant states that the Sauer device is extremely slow, but fails to clearly state any speed relationship with regard to the claimed invention. As to multiple drives, as noted previously, mere duplication of working parts is well within one's level of ordinary skill in the art and furthermore, it is well known in the mechanical arts to increase motor/power/driver size or numbers to improve efficiencies.

Conclusion

Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event,

Art Unit: 3725

however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.
